

To Photograph is to Be

The Cycles of Nature and Change

The full moon represents completion, renewal, and the height of energy. It's a time for reflection, celebrating achievements, and letting go of what no longer serves a purpose. Just as the moon reaches its peak and begins to wane, life follows cycles of growth, transformation, and renewal.

Embracing Transformation

Transformation is the ultimate goal in life—to evolve, change, and grow. It's about being in a state of constant movement. Through learning, whether through reading or using technology, life begins to flow and flourish. Growth happens when we embrace each day as an opportunity to become better.

A Love for Nature's Shifts

Watching the change of seasons, seeing leaves fall and decay, reminds us of life's impermanence. Just like the trees, we are bound by the natural cycle of life. These changes remind us of our mortality, urging us to treat each day like it's our last. Life is filled with endless possibilities when we remain present, grounded in the moment, and unburdened by the past or the future.

Disease: More Than a Physical Ailment

Disease is more than just a physical ailment. It can be mental, born from dwelling on the past or fearing the future. When we focus on the present and embrace life's complexities, we find peace. It's in the small details—the way flowers bloom, how light dances upon them—that we reconnect with the world.

Photography: A Gateway to the Extraordinary

Photography allows us to step outside the passage of time, to look closely at life and create a new vision of reality. Through the lens, the ordinary becomes extraordinary, offering a way to uplift the mundane. This is the challenge of a photographer: to transform the everyday into something remarkable.

The Joy of a Camera in Hand

With a camera always in my pocket, I'm constantly intrigued by the world around me. Technology like ChatGPT allows me to learn and grow, augmenting my life in ways that keep me evolving. Through documenting life with my camera, I become closer to the essence of being, capturing the beauty in each moment.

Photography as a Path to Being

To photograph is to be. It's not just about making images—it's about deepening one's connection to life. Photography fosters a lust for existence, encouraging us to embrace change and continuously move forward. Each day is a new opportunity for growth, much like trees reaching for the sky. Photography transforms everyday life, guiding us in our journey of becoming.

A Beautiful Fall Day

Just as the trees grow tall, we too can grow through our photographic process. Each photograph, each moment of seeing, is a step towards understanding the world more deeply—a reflection of our journey through the seasons of life.
